Create a sign in/out report with Google Sheets

This integration is run using webhooks created in Zapier, which connects a Google Sheets spreadsheet with your OnLocation account.

By setting up triggers in OnLocation, each time an employee signs in to your location, their details are added as a new row in the spreadsheet. The same row is then instantly updated when the employee signs out.

This may be a good solution for your organization if you need a report of who is currently on-site and you don't want to give OnLocation reporting access to everyone who needs this information.

Before you start

- Create your spreadsheet in Google Sheets. Make sure you include all the fields you need to match with your OnLocation account, for example System ID, First Name, Surname, Signed In, Signed Out.
- Sign up for a paid Zapier account (if you don't already have one)
- Make sure you have either the Account Owner or IT Support user role in OnLocation

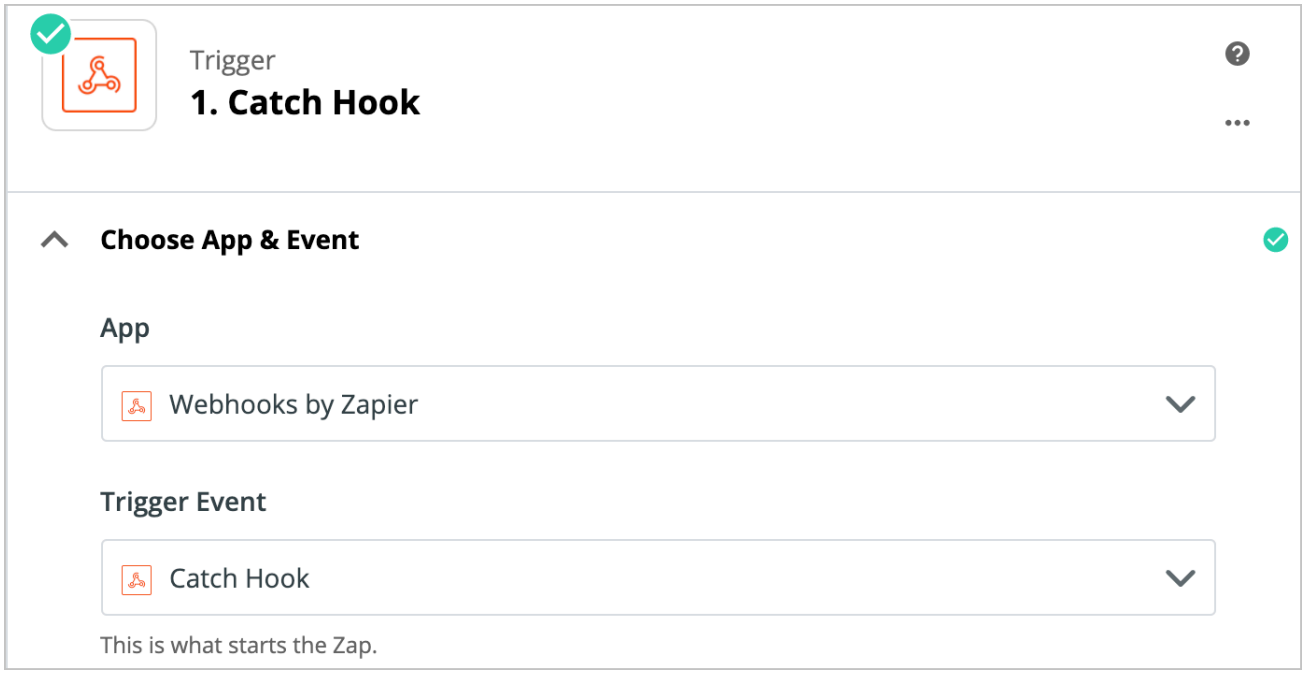

To avoid connection errors, you must set up the integration in this sequence.

Set up the integration

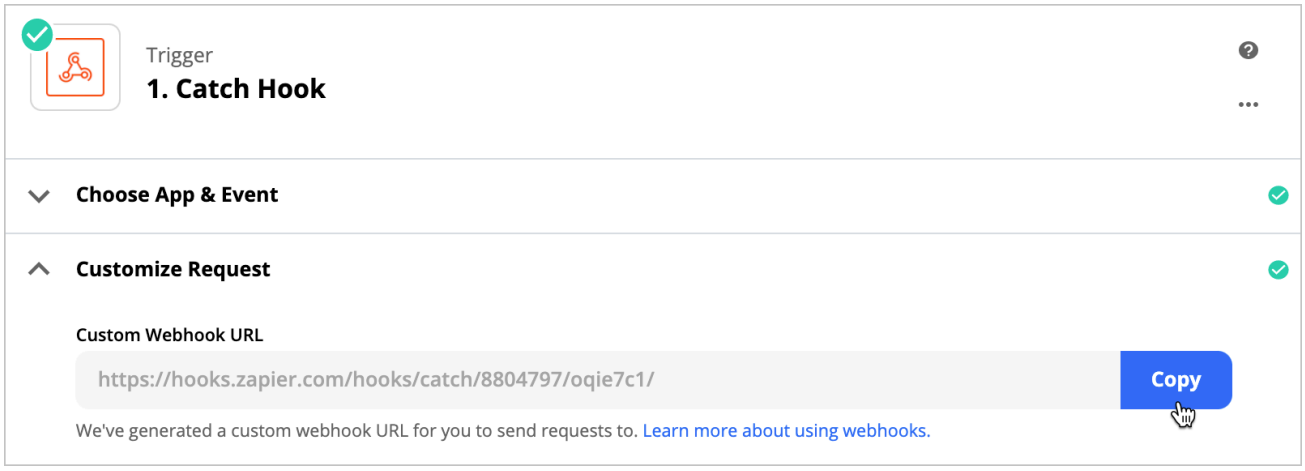

Step 1: Create a webhook in Zapier

Create a webhook in Zapier. This webhook will be used to record employee sign in information in your spreadsheet.

1. Log into your Zapier account.
2. Click **Make a Zap**.
3. Select **Webhooks by Zapier** as your **Trigger App**.
4. Select **Catch Hook**, then click **Continue**.

5. Click **Copy** next to the Custom Webhook URL, then click **Continue**.

Keep this tab or window open, you'll continue working on this screen in step 4.

Step 2: Add the webhook in OnLocation

To add the webhook:

1. In a new tab, log in to OnLocation.
2. Go to **Tools > Accounts**.
3. Select **Integrations** from the left-hand menu.
4. Click the **Webhooks** tile.
5. If this integration isn't active, click **Enable**, then click **Manage Settings**. If you're already using Webhooks, click **Settings**.
6. Click **Create a New Webhook**.
7. Add the **Webhook Name**. You may like to note it is for Google Sheets employee sign in.
8. Paste in the **Webhook URL** from Zapier.
9. Select **POST** as the method.
10. Select **Form encoded** as the content type.
11. Click **Save**.

Step 3: Create a trigger in OnLocation

Set up a trigger so OnLocation connects an event to the webhook:

1. Go to **Locations**, then select the location from the drop-down list.
2. Select **Triggers**.
3. Click **Create a New Trigger**.
4. Enter a trigger name. You may like to note it is for Google Sheets employee sign in.
5. Set the trigger status to **Active**.
6. Select **Employee Sign In** as the trigger event, then click **Next**.
7. (Optional) Select the **Trigger Rules** tab, enter any trigger rules that you might like to use, then click **Next**.
8. Select the **Trigger Actions** tab, then click **Create a New Action**.
9. Select **Webhook - Triggers a Webhook URL** from the drop-down menu.
10. Select the webhook.
11. Select **Full** as the data type.
12. Click **Preview**.
13. Select a record, then click **Send Data**.
14. Click **Save & Close**.

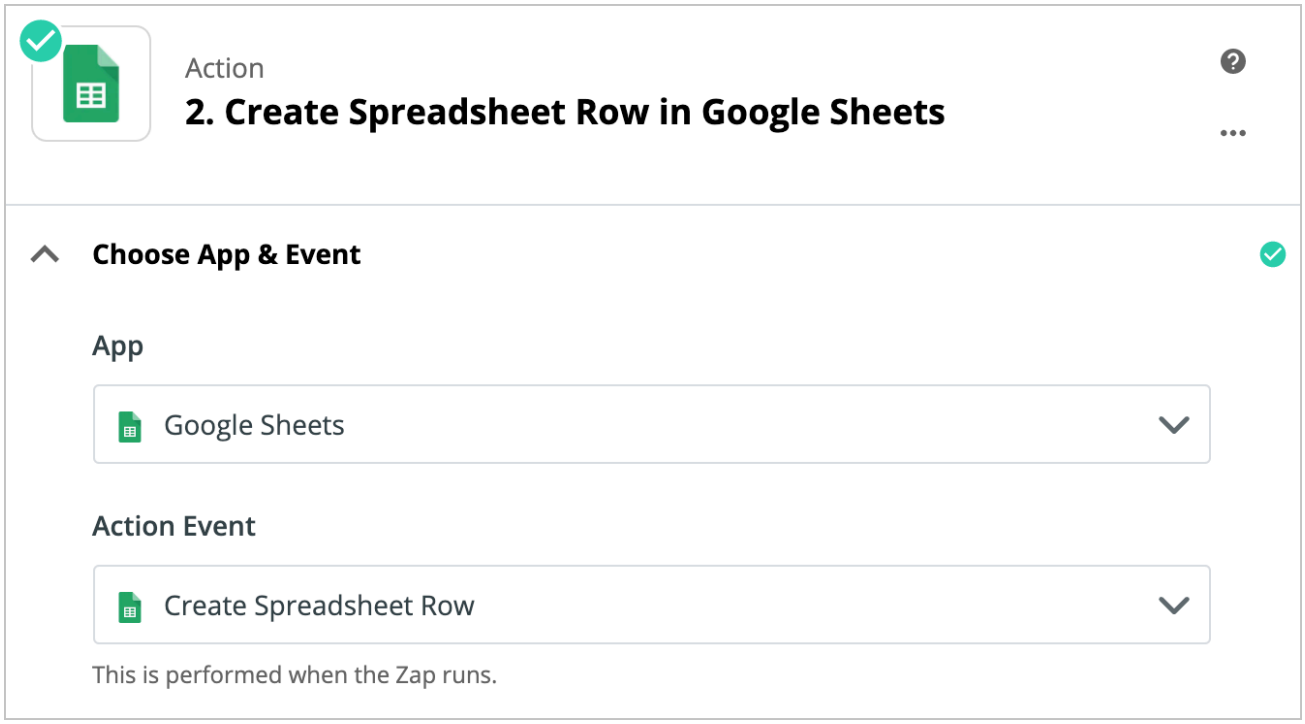

Keep this tab or window open, you'll continue working on this screen in step 6.

Step 4: Create an action in Zapier

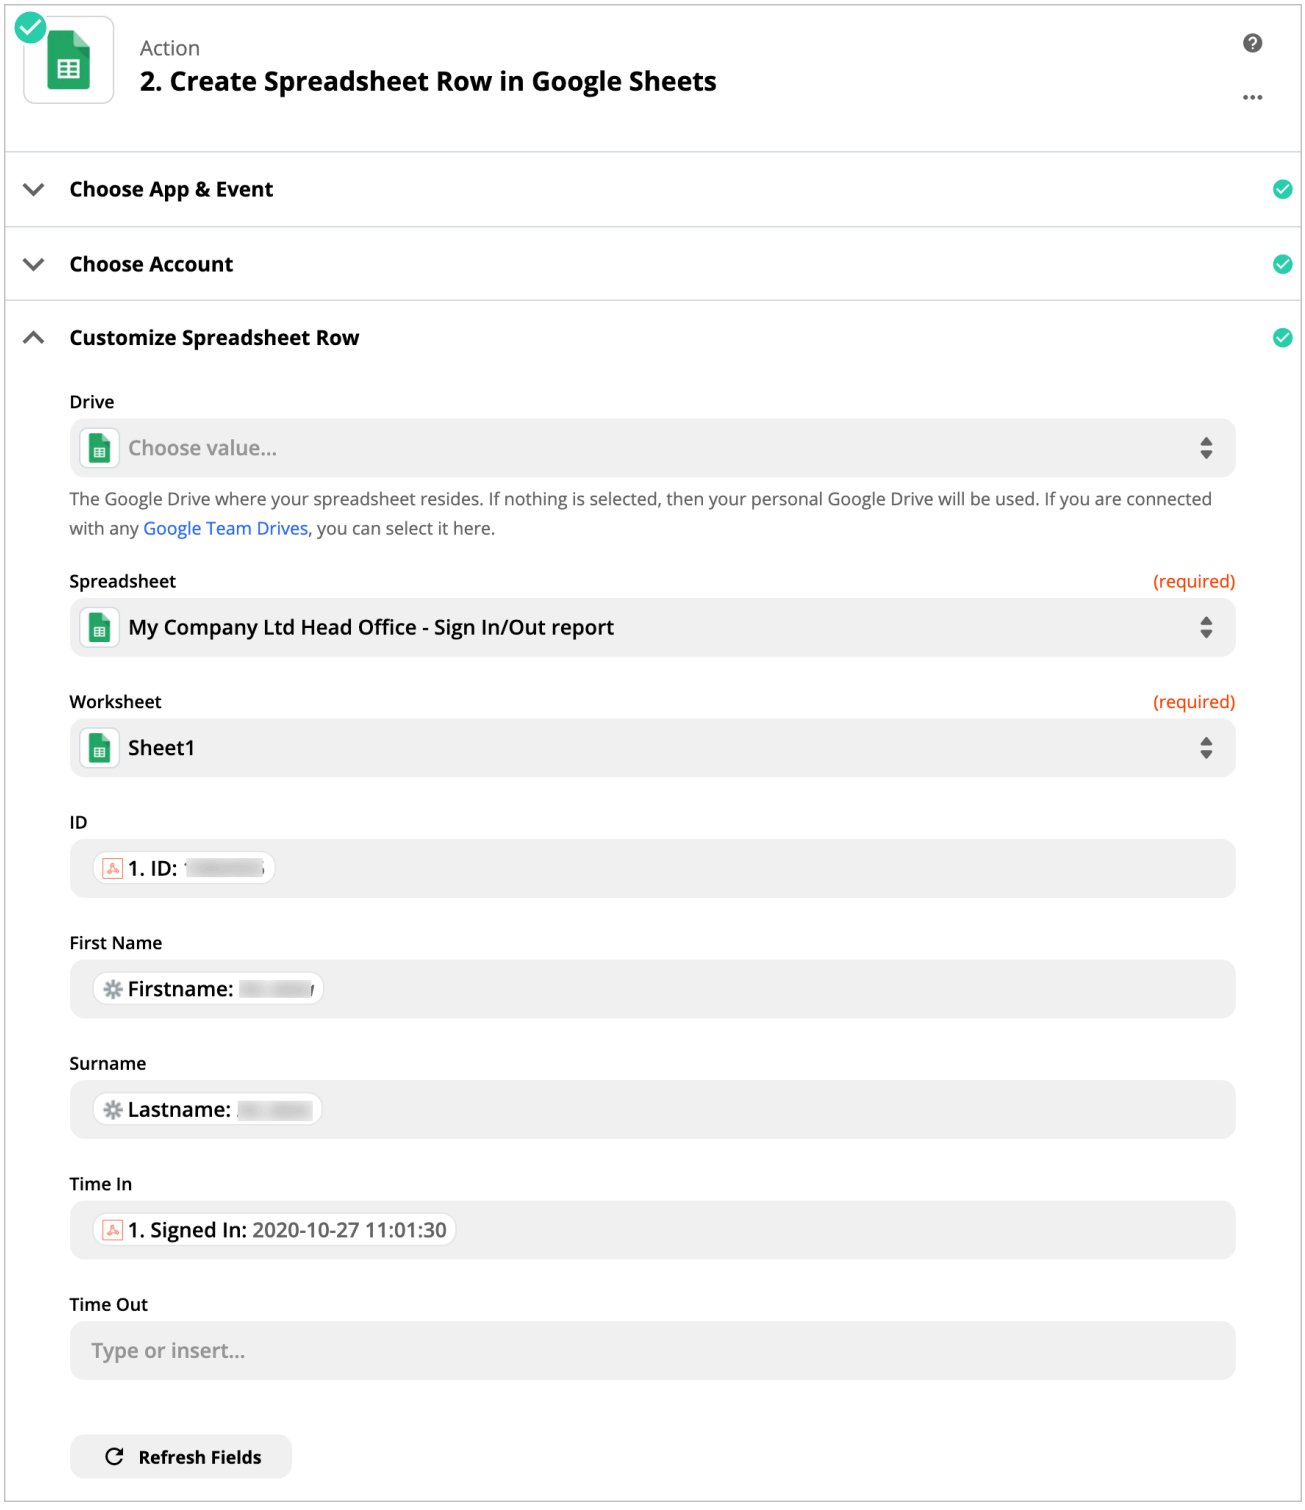

Create an action in Zapier to send the employee sign in information to the spreadsheet. Open Zapier in the same tab or window you were using previously:

1. Click **Test trigger**. If it's successful, click **Continue**.

   If it fails, check that you've entered the custom URL correctly in OnLocation and try the test again.
2. Select **Google Sheets** as the app.
3. Select **Create Spreadsheet Row** as the event action, then click **Continue**.

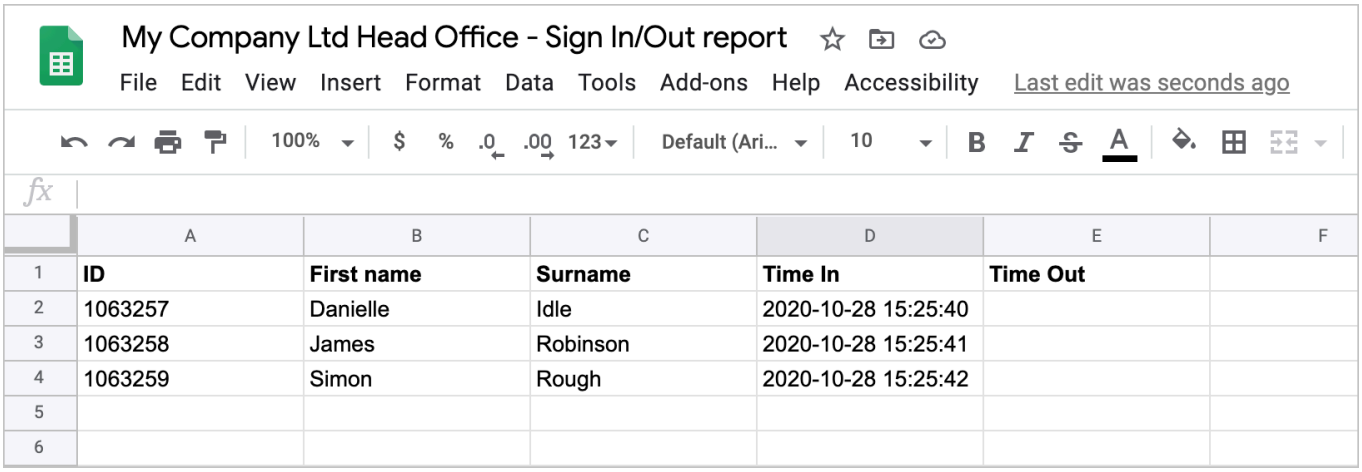

4. Select your Google Sheets account, click **Continue**.
5. Customize the spreadsheet row: choose the drive, select the spreadsheet and worksheet, then insert the relevant data fields. In this example ID, Firstname, Lastname and Signed In have been added.

6. Click **Continue.**
7. Click **Test & Review.**

To check that the first stage of the integration works, sign an employee into your location using your Sign In/Out Manager, then look for the update in your spreadsheet.

	A	B	C	D	E	F
1	**ID**	**First name**	**Surname**	**Time In**	**Time Out**	
2	1063257	Danielle	Idle	2020-10-28 15:25:40		
3	1063258	James	Robinson	2020-10-28 15:25:41		
4	1063259	Simon	Rough	2020-10-28 15:25:42

6						

Step 5: Create a second webhook in Zapier

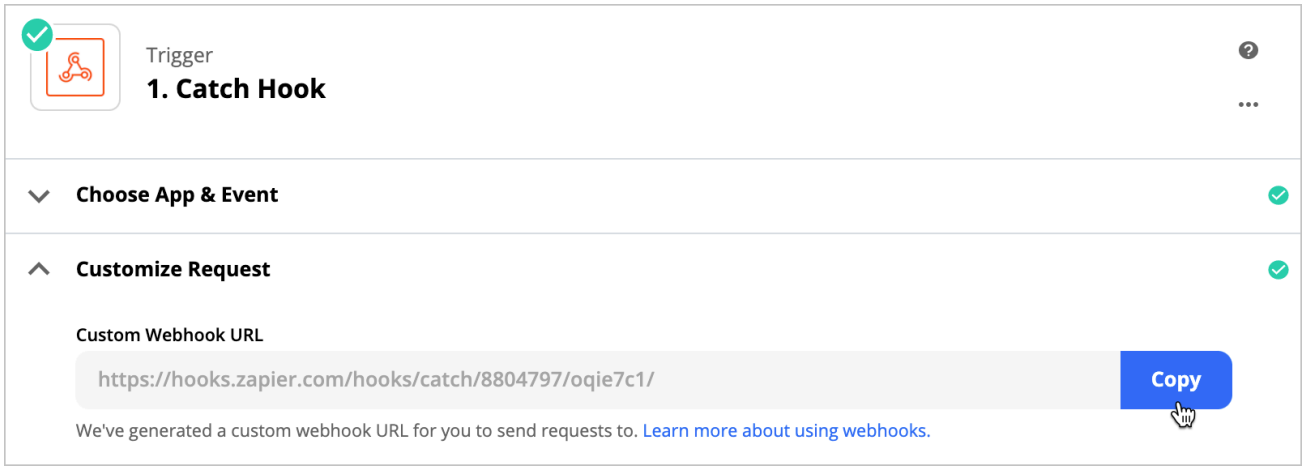

Create another webhook in Zapier. This webhook is to update the employee sign out information in the spreadsheet.

1. Click **Make a Zap.**
2. Select **Webhooks by Zapier** as your Trigger App.
3. Select **Catch Hook.**

4. Click **Continue.**

5. Click **Copy** next to the Custom Webhook URL, then click **Continue**.

Keep this tab or window open, you'll continue working on this screen in step 8.

Step 6: Add the webhook in OnLocation

To add the webhook:

1. Go to **Tools > Accounts**.
2. Select **Integrations** from the left-hand menu.
3. Select the **Webhooks** integration, click **Settings**.
4. Click **Manage Settings**.
5. Click **Create a New Webhook**.
6. Add the **Webhook Name**. You may like to note it is for employee sign out.
7. Enter the **Webhook URL** (paste this from your copied URL in Zapier).
8. Select **POST** as the method.
9. Select **Form encoded** as the content type.
10. Click **Save**.

Step 7: Create a second trigger in OnLocation

Set up a trigger for employee sign out:

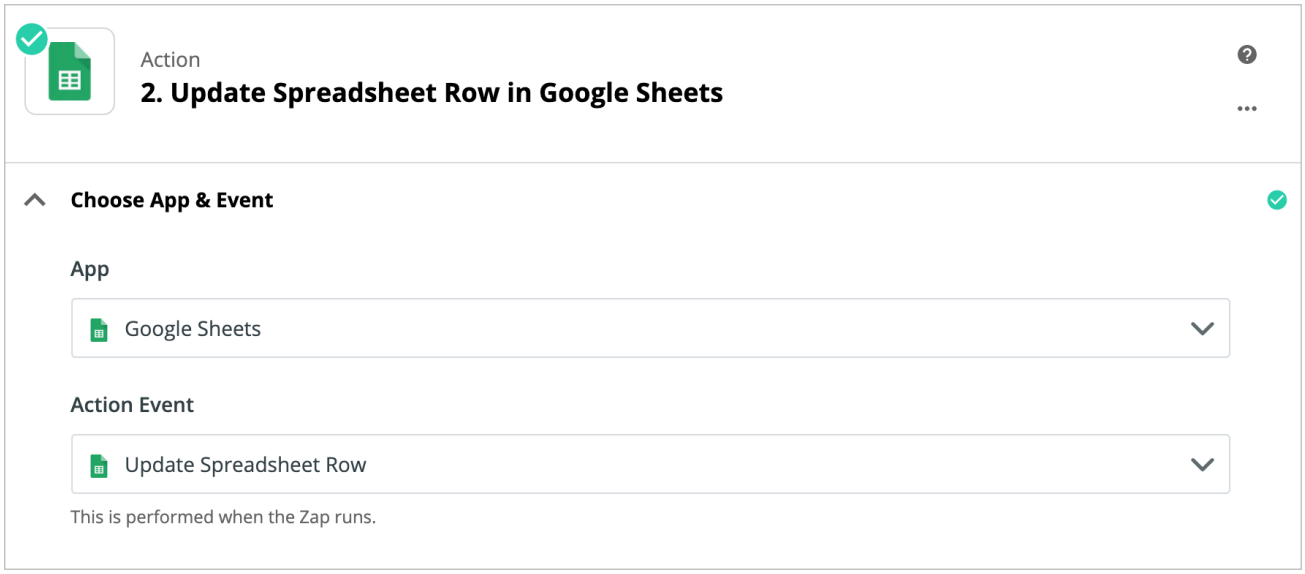

1. Go to **Locations**, then select the location from the drop-down list.
2. Select **Triggers**.
3. Click **Create a New Trigger**.
4. Enter a trigger name. You may like to note it is for Google Sheets employee sign out.
5. Set the trigger status to **Active**.

6. Select **Employee Sign Out** as the trigger event.
7. (Optional) Select the **Trigger Rules** tab, enter any trigger rules that you might like to use, then click **Next**.
8. Select the **Trigger Actions** tab, then click **Create a New Action**.
9. Select **Webhook - Triggers a Webhook URL** from the drop-down menu.
10. Select the second webhook.
11. Select **Full** as the data type.
12. Click **Preview**.
13. Select a record, then click **Send Data**.
14. Click **Save & Close**.

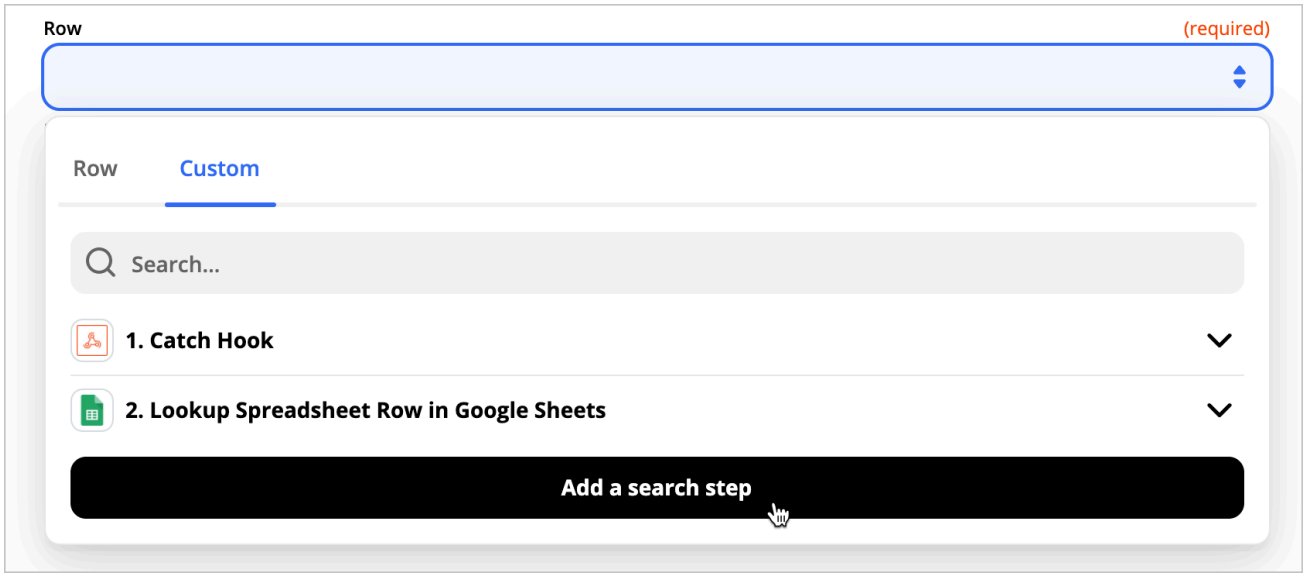

Step 8: Create an action in Zapier

The last step is to create an action in Zapier to update the spreadsheet with the employee sign out details:

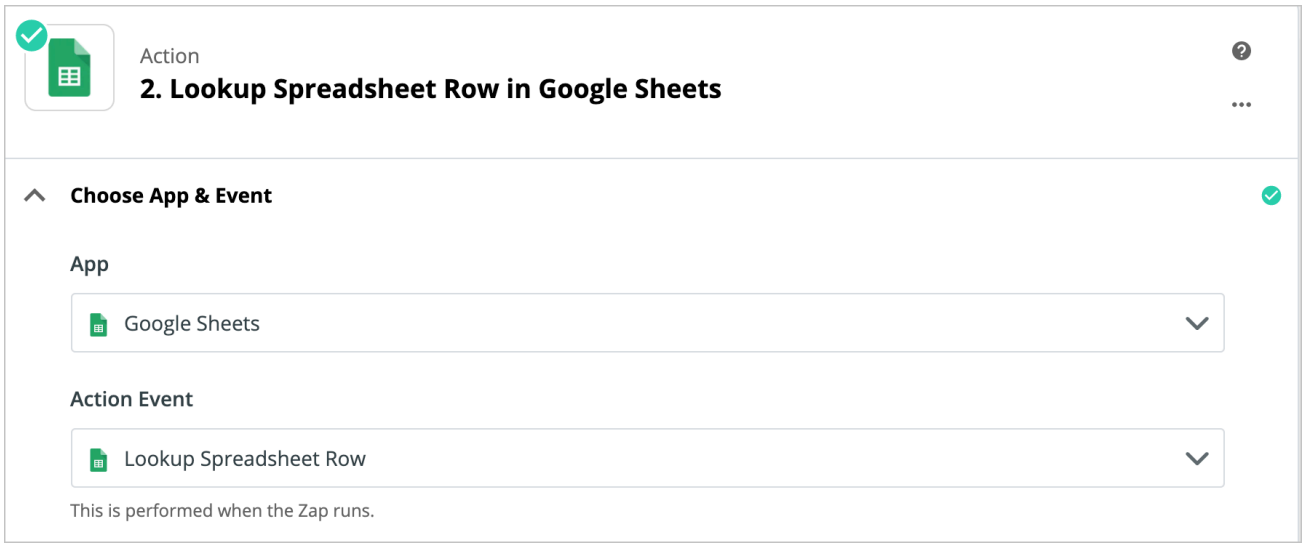

1. Click **Test trigger**.
2. Select **Google Sheets** as the app.
3. Select **Update Spreadsheet Row** as the event action, then click **Continue**.

4. Select your Google Sheets account, then click **Continue**.
5. Customize the spreadsheet row: choose the drive, select the spreadsheet, and worksheet.
6. Click on the **Row** field, then click **Add a search step**. A new action will appear above the one you've just added.

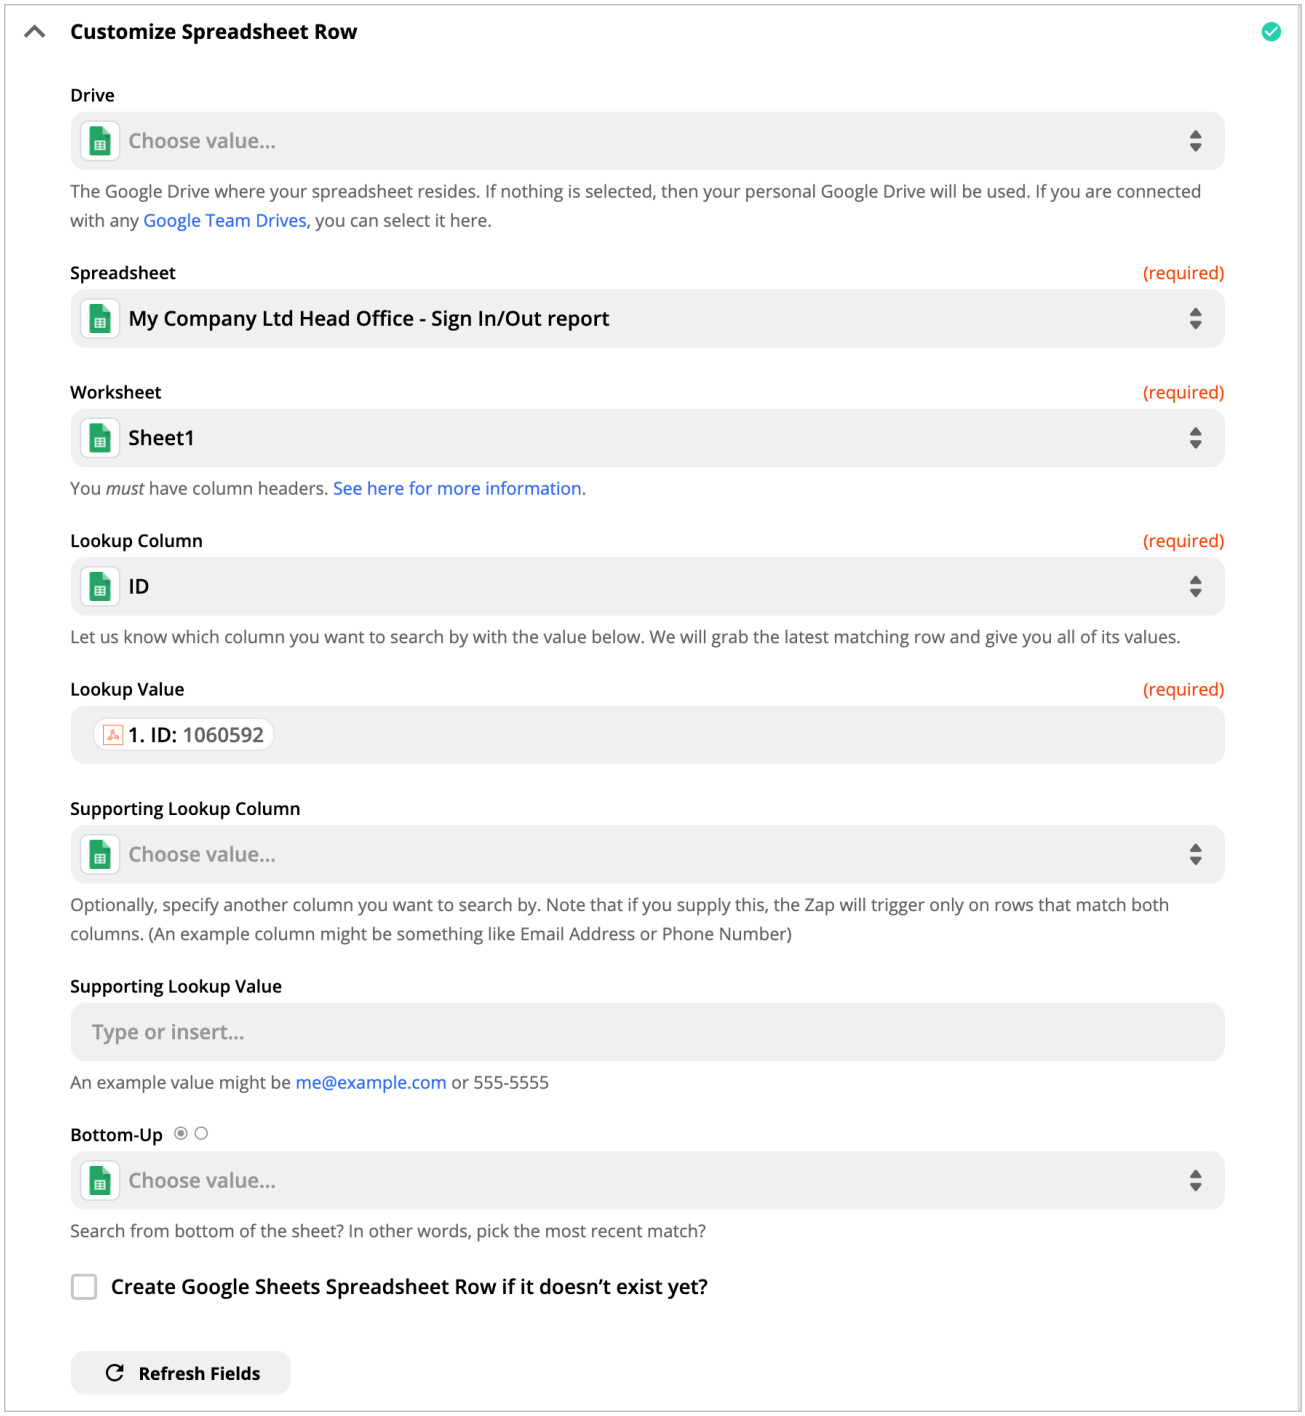

7. Select **Google Sheets** as the app and **Lookup Spreadsheet Row** as the event action, then click **Continue**.

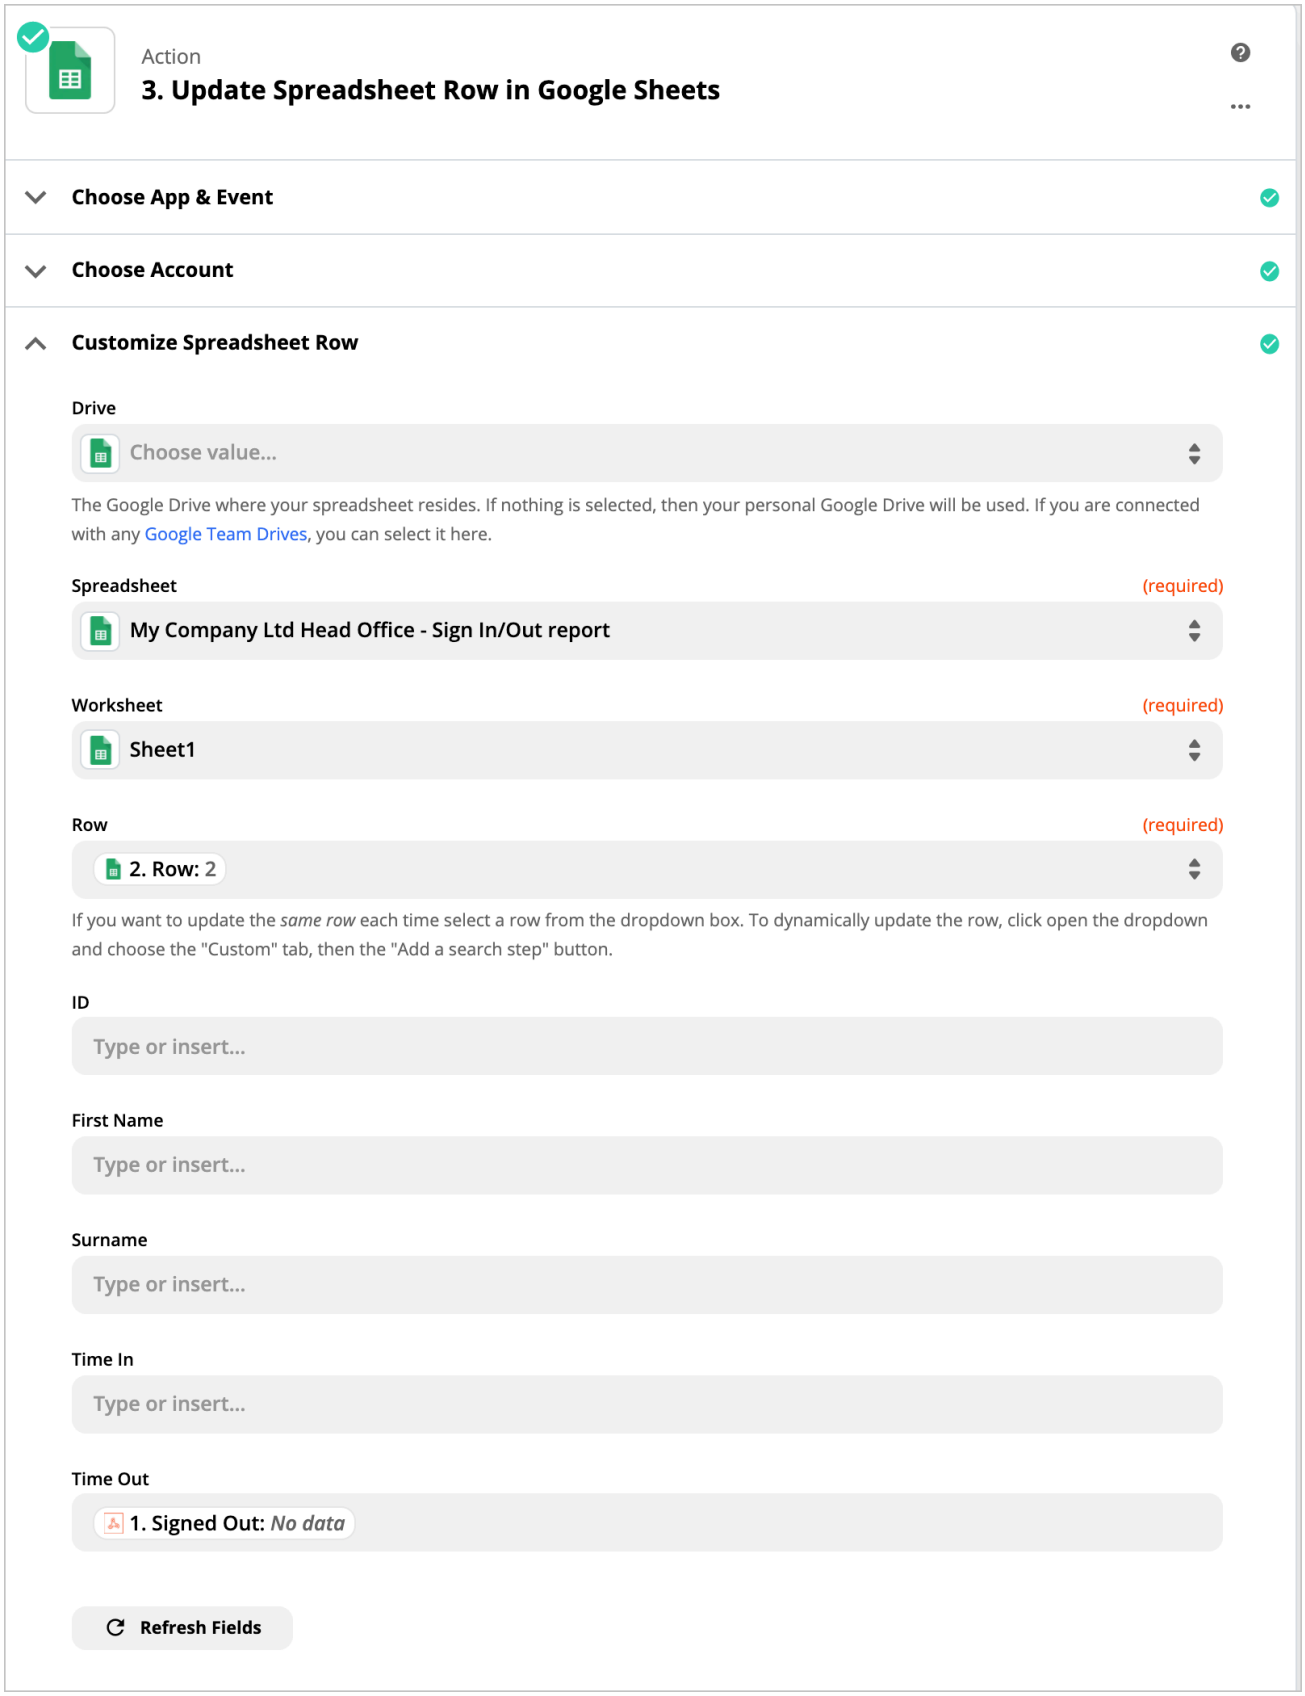

8. Select your Google Sheets account, then click **Continue**.
9. Customize the spreadsheet row: choose the drive, select the spreadsheet, and worksheet.
10. Choose **ID** as the **Lookup Column**.

11. Choose **ID** as the **Lookup Value.**

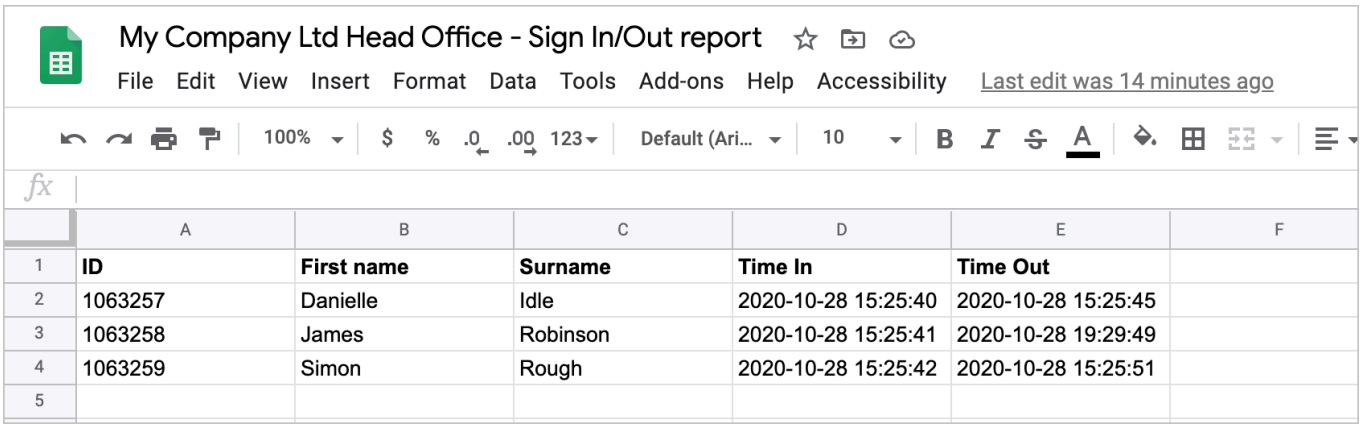

12. Click **Continue.**
13. Click **Test & Review.**
14. Go back to the **Update Spreadsheet Row** action, then add the **Signed Out** field to the relevant data category. In this example, it has

been added to the **Time Out** column in the spreadsheet.

15. Click **Continue**.
16. Click **Test & Review**.

To check the integration, sign out an employee in your Sign In/out Manager, and check that the row updated in your spreadsheet.
